Teaching Philosophy

My short time experience of being a teacher has taught me that the role of a teacher comes with great joy but also with great responsibility to do our best for the students. I like to teach to have a part in improving the world, this helps me satisfy my need to serve the environment I am living in. Other than that I have discovered a great joy seeing students thrill when they learn something new. Being a good teacher requires me to give myself fully to every student that comes to me, and honestly doing anything I can to make a difference in what they knew before and what they know now. My main goal as a teacher is to encourage students to reach to horizons that they never imagined possible.

My experience as a teacher begun when I was at a young age, as I had a good knowledge of English I started teaching to other younger friends when I was 15. This experience was so interesting for me that after a year I started taking Teacher Training courses and I officially became an English instructor at language institutes in my home country where English is not the first language. I spent 5 years teaching English to different levels and groups of people. This experience was very special for me since I got the benefit of improving my own language skills as well as my students.

My Goals as a teacher are trying to do the best to promote growth by using creativity, and giving the students the freedom to think and discover whatever they want. I want the students to gain a mastery of knowledge and a fluency in finding a way to discover the things they want to do. I should also point my student in a direction to be able to ask questions without being shy, or once a question is asked, I want students to express their idea without thinking they might be wrong.

My Responsibilities are mostly in the field of creating an environment conductive to learning. I should do my best to coach and facilitate the students throughout the learning process by providing information and giving useful guidelines in order for them to achieve their learning target. As a teacher in the field of computer science, which is an evolving field of study one of my main roles is to teach the students to apply and use new discoveries and studies to their work. I myself as a teacher in this field should also update my knowledge on a regular basis. Students should be encouraged to develop professional and communication skills, this will be achieved by giving presentations to the class, evaluating themselves and peers, writing project reports, and working in groups. At last but not least I think an important role a teacher has is evaluation and assessment of the students which has to be very fair and honest. Both the students and I benefit greatly from frequent feedback on our progress in the course this way we can address any problems before it becomes too serious.

In my personal point of view, a teacher should do his/her best to be different. I think that learning should not be limited in any walls. I will try to prepare my teaching materials in a way that it will encourage my students to like to read and study more, at the meantime relate the topics to real life. At the end I believe I should teach in a way that my students could be able to have self-confidence, good interpersonal skills and excellent knowledge.
