CSCI 1301: Introduction to Computing and Programming

Adding command line arguments to Eclipse projects

1. In your Eclipse project, right-click on the class containing the main method used to run the program.
2. From the context menu that appears, choose Run As ➔Run Configurations.

3. Select the class with the main method from the left hand side list.
4. Click on the Arguments tab and place the argument in the Program arguments text box.
5. Click Apply.
